BusFinder™

Real time information across your route

The key to a successful real time information system is in the delivery - making accurate information available to bus passengers when and where they need it. Connexionz has developed the innovative BusFinder™ unit to cost effectively deliver arrival information to passengers at bus stops along your routes. The BusFinder™ can interface with your existing real time data, and provide real time information at bus stops - complementing existing variable message signs at less frequented locations.

The BusFinder™ delivers data that gives your bus passengers control at bus stops, dramatically decreasing their anxiety as they wait for the bus. This will improve the public perception of bus transport and result in an increase in your passenger numbers.

Why choose the BusFinder™?

The BusFinder™ is the only product that makes extensive city-wide deployment an option. The benefits of using the BusFinder™ along your bus routes include:

Strong branding

The casing color and decal design reinforces your brand.

Cost effective

Powered by long-lasting batteries
- no mains power required*.

Discreet size

Avoids the consent process often required for larger signs at the place of deployment.

Vandal proof

Protected by a cast aluminum casing, with no external switches.

Easy to install

The BusFinder™ can be mounted on an existing pole.

Simple to manage

Schedule changes are communicated to each BusFinder™ unit via radio - you don't need to visit each unit to make changes.

*A mains power-operated BusFinder™ is also available. Some features are not available on standard BusFinder™ units.

How it works

1. Select your route

Passengers select a route by pressing a touch-sensitive button on the display unit. Alternatively they can press the 'Next bus' button, displaying the next bus arriving at that stop, regardless of the route taken. We can configure the buttons for up to twelve routes.

2. Watch the time bar

Within seconds, a time bar lights up to indicate how many minutes from that stop the bus is. The time scale can be labeled to your requirements.

Indicators also display any relevant information:

- Today's service ended - no more buses today
- Refer to timetable - predicted arrival time exceeds time scale shown
- Wheelchair access - indicates whether the bus is suitable for wheelchairs (not available on all systems)

Contact Connexionz now to find out how the BusFinder™ can work for you.

About Connexionz

Founded in 1998, Connexionz Limited has evolved into a trusted provider of world-class bus tracking systems.

As a company, Connexionz has an established ability to analyse customer needs and make practical recommendations. Their dedicated team has a proven and dependable reputation for delivering projects successfully, on time and to budget.

Connexionz takes pride in its bus tracking products as they are efficient, user-friendly and affordable. With reliable software and hardware products of innovative design, Connexionz can help their customers to reduce costs, lower risk and grow patronage. In addition, their products are continually being developed to suit both the growth in user expectations and technological advances

Connexionz has an international outlook with clients in America, Britain, Australia, New Zealand, China, the Netherlands and Brazil.
